

개요

# 안드로이드를 선택한 이유

개요

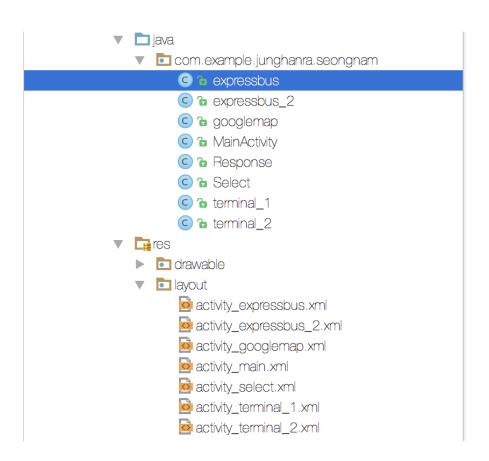

Java로 무엇을 만들수 있을까 생각하다가 안드로이드를 개발할 때 Java를 사용한다는 얘기를 듣고 선택 (Java는 플랫폼 독립적이라는 성격 때문에 안드로이드 개발에 적합)

# 개발 과정

# 안드로이드

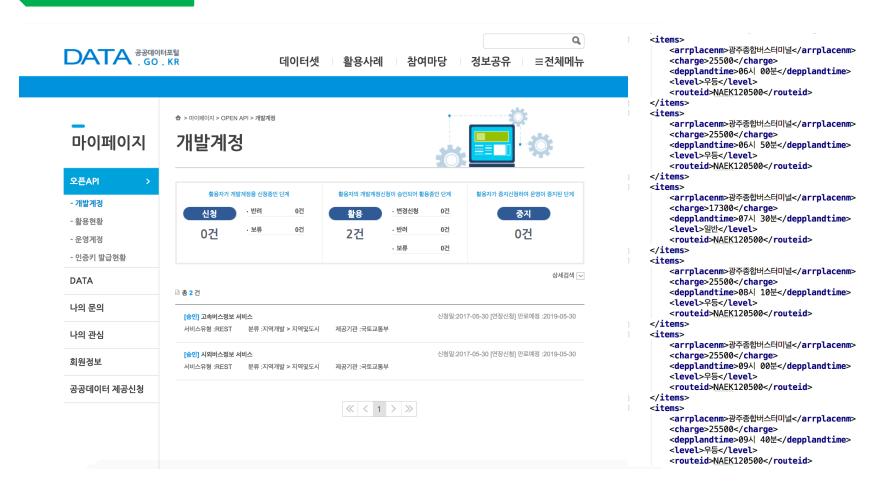

### 개발 과정

안드로이드는 기본적으로 Activity에 java 파일과 Layout으로 구성

# 공공데이터포털 API

#### 개발과정

공공데이터 포털에서 시외버스터미널&고속버스터미널 API사용

(총 4개 xml사용 각각 시외버스 고속버스 로 , 터미널명&터미널ID와

터미널명&터미널ID&출발시간&요금 으로 이루어진 xml)

## Java Class 파일

#### 개발과정

```
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState):
   setContentView(R.layout.activity_terminal_1);
   listView = (ListView)findViewBvId(R.id.listview1);
   final ArrayList<Response> list = xmlParser();
   final String[] data = new String[list.size()];
   for(int i=0;i<list.size();i++) {</pre>
       data[i] = list.get(i).getarrplacenm();
   ArrayAdapter<String> adapter = new ArrayAdapter<>>(getApplicationContext(),
            android.R.layout.simple list item 1,
            data):
   listView.setAdapter(adapter);
   EditText editTextFilter = (EditText)findViewById(R.id.editTextFilter);
   editTextFilter.addTextChangedListener(new TextWatcher() {
       @Override
       public void afterTextChanged(Editable edit) {
            String filterText = edit.toString(); if (filterText.length() > 0)
            { listView.setFilterText(filterText) ; } else { listView.clearTextFilter() ; }
       public void beforeTextChanged(CharSequence s, int start, int count, int after) {
       public void onTextChanged(CharSequence s, int start, int before, int count) {
    listView.setOnItemClickListener((parent, v. position, id) → {
            String content = RouteidVector.get(position);
            Intent intent = new Intent(getApplicationContext(), terminal_2.class);
            intent.putExtra("content", content);
            startActivity(intent);
   });
```

```
protected ArrayList<Response> xmlParser() {
   RouteidVector = new Vector<String>();
   ArrayList<Response> arrayList = new ArrayList<>>();
   InputStream is = getResources().openRawResource(R.raw.intercity bus):
   // xmlPullParser
   try {
        XmlPullParserFactorv factorv = XmlPullParserFactorv.newInstance():
       XmlPullParser parser = factory.newPullParser();
        parser.setInput(new InputStreamReader(is. "UTF-8"));
        int eventType = parser.getEventType();
        Response items = null:
        while(eventType != XmlPullParser.END_DOCUMENT) {
            switch (eventType) {
                case XmlPullParser.START TAG:
                    String startTag = parser.getName():
                    if(startTag.equals("items")) {
                        items = new Response():
                    if(startTag.equals("arrplacenm")) {
                        items.setarrplacenm(parser.nextText()):
                    if(startTag.equals("routeid")){
                        items.setrouteid(parser.nextText()):
                    break:
                case XmlPullParser.END TAG:
                    String endTag = parser.getName();
                    if(endTag.equals("items")) {
                        RouteidVector.add(items.getrouteid());
                        arrayList.add(items);
                    break:
            eventType = parser.next();
```

Java 클래스 파일에는 해당 Layout에 무엇을 하는지 담겨 있음. (xml pull parser를 이용하여 각 데이터를 vector에 저장후, Layout- listview에 뿌려줌)

# Java class 파일

#### 개발과정

```
public class Response {
    String arrplacemm, routeid, depplandtime, charge, level;
    public String getarrplacenm() { return arrplacenm; }

public void setarrplacenm(String arrplacenm) { this.arrplacenm = arrplacenm; }

public void setrouteid() { return routeid; }

public void setrouteid(String routeid) { this.routeid = routeid; }

public String getdepplandtime() { return depplandtime; }

public void setdepplandtime(String depplandtime) { this.depplandtime = depplandtime; }

public void setcharge() { return charge; }

public void setcharge(String charge) { this.charge = charge; }

public String getlevel(){return level;}

public void setlevel(String level) { this.level=level; }
```

```
XmlPullParserFactory factory = XmlPullParserFactory.newInstance();
XmlPullParser parser = factory.newPullParser();
parser.setInput(new InputStreamReader(is, "UTF-8"));
int eventType = parser.getEventType();
Response items = null;
while(eventType != XmlPullParser.END_DOCUMENT) {
    switch (eventType) {
        case XmlPullParser.START_TAG:
            String startTag = parser.getName();
            if(startTag.equals("items")) {
                items = new Response();
                if (startTag.equals("routeid")) {
                    items.setrouteid(parser.nextText());
                    Log.d("TEST", items.getrouteid());
                if (startTag.equals("depplandtime")) {
                    items.setdepplandtime(parser.nextText());
                if (startTag.equals("charge")) {
                items.setcharge(parser.nextText());
                }
            break:
        case XmlPullParser.END TAG:
            String endTag = parser.getName();
            if(endTag.equals("items")) {
                arrayList.add(items);
                if(data1.equals(items.getrouteid())){
                    Depplandtime.add(items.getdepplandtime());
                    Charge.add(items.getcharge());
            break;
    eventType = parser.next();
```

# Layout

#### 개발과정

```
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"</pre>
   xmlns:tools="http://schemas.android.com/tools"
   android:layout_width="match_parent"
   android:layout height="match parent"
   tools:context="com.example.junghanra.seongnam.terminal_1">
    <TextView
        android:layout_width="wrap_content"
       android:layout height="wrap content"
       android:textSize="26sp"
        android:layout_marginRight="8dp"
       android:id="@+id/textView1"
        android:text="터미널 검색" />
    <EditText
       android:layout_width="match_parent"
       android:layout_height="wrap_content"
        android:layout_toRightOf="@id/textView1"
       android:id="@+id/editTextFilter"/>
    <ListView
        android:layout width="match parent"
       android:layout_height="match_parent"
       android:layout below="@id/editTextFilter"
       android:textFilterEnabled="true"
       android:id="@+id/listview1"/>
</RelativeLayout>
```

Layout파일에 화면에 구성될 것들을 생성
